

# SCOURGE®

## Mosquito Control at its Best

Developed in conjunction with the World Health Organization and the Centers for Disease Control in the U.S., SCOURGE® is widely regarded as the mosquito adulticide by which others are judged.

Scourge combines the pyrethroid resmethrin with PBO to produce an insecticide that causes fast knockdown and death with no "biting frenzy" and a residual that's measured in minutes, not weeks. Since Scourge is non-corrosive, it won't damage spray equipment or the paintwork of cars or planes. In sub-lethal doses it causes mosquitoes to lose some or all of their legs, inhibiting their flying, feeding and mating abilities.

As a concentrate, Scourge 18%+54% can be readily diluted in light mineral oil, soybean oil or other suitable solvent or diluent. The ready-to-use formulation is Scourge 4%+12%. Both are federally registered for ground and aerial applications and have no setback from water.
